

## Powerflare #A-POWERFLARE - Red LED

Replace your incendiary flares with a safer LED PowerFlare. It's more economical, more effective and can be used in more places.

- **Can Be Seen for Miles:** PowerFlare safety beacon features LED technology, which emits super-bright light in all directions that can be seen for miles at night. Features nine flash patterns and solid-on mode. Battery operated.
- **Durable for Any Conditions:** High-grade military polymer shell withstands demanding road conditions. Each PowerFlare unit is about the size of a hockey puck yet is strong enough to withstand being run over by trucks at highway speeds. Can be deployed in harsh environments, like hot or freezing temperatures and underwater to depths of 300 feet! No chemicals to decompose, and no corrosion. Ready to go when you need it. Safe to use in gasoline, many HAZMAT situations and high winds with no harm to you or the environment.
- **Everyone Can Use a PowerFlare:** Extend your zone of safety beyond your vehicle's emergency light bar. Mark areas, vehicles, personnel and litters/gurneys on helicopter landing zones. Mount on seats and handlebars of motorcycles and bicycles for 360° coverage in traffic control, warning light or rescue operations. Set on or under cones or barricades for greater work zone safety. Place on diver for increased visibility during SCUBA and rescue dives. In an emergency, flare can even be removed and will float to the surface, marking the diver's location. Note: This item is drop-shipped from vendor.
